tory before them; or—but this is extremely unlikely—that they were all of Algonquian origin. 172

Implements of Stone and Other Materials

As pointed out before, we ought not to expect to find much strictly archeological data relating to the Winnebago in their Wisconsin habitat. As, however, they probably reached this habitat before the discovery of America, some of the archeological finds may easily go back that far. Unfortunately we have no way of determining, even approximately, the age of the artifacts.

We will now confine ourselves to a description of the more important types of artifacts and remains found on old Winnebago sites without going into the question of their respective age.

Implements and utensils were made of stone, clay, shell, bone, wood, antlers, and turtle claws (pl. 10). According to information obtained from the present Winnebago, which is supported by the testimony of the myths and tales, but few objects were made of stone. The most important of these was the stone hatchet. It may even be questioned whether the Winnebago originally made these, for they are given a supernatural origin by those few Winnebago who mentioned their existence, and it has been the author's experience that objects to which a supernatural origin is ascribed are generally either of recent origin or have been borrowed. None of the myths or tales even mention their existence. Nevertheless a large number of stone implements, most of them presumably stone hatchets, has been found at Doty Island, near Menasha, Wis. (pl. 11), which had at one time been one of their principal village sites. It is quite probable that the Winnebago obtained most of these from the neighboring Algonquian tribes who were well known for their skill in working stone. [411 324] [439]

Copper Implements

The Winnebago are known to have used copper implements in fairly great abundance, the only question being whether they were the original makers of these objects. We do not think they were, and base our opinion on the answers given by present-day Indians and the total absence of their mention in the myths. Both iron and presumably copper are mentioned in certain myths, but these passages are clearly of European origin. 172 325 [177]

Practically all of our knowledge of the nature and distribution of copper objects in Wisconsin has been conveniently summarized in Mr. C. E. Brown's paper entitled "The native copper implements of Wisconsin,"[13] and all that we mention here is taken from this little monograph.
